2:30 works best for me. Need to include Heidi Bojes as TDSHS is the lead for organizing public health decision at the state level.

Subject: Health Authority Request for Meeting

Afternoon everyone,

The Bi-City-County Health Authority, Dr. Scott Milton, would like to meet with you all (EPA, TCEQ, Building Official) if at all possible sometime tomorrow afternoon to review the monitoring/sampling data so that he can communicate with you all directly regarding the determinations that will need to be made concerning habitation of the home on Carolyn Street. He would like to meet around 3 pm or later tomorrow if at all possible. The meeting location would be the EOC on Buchanan Street. Please "reply to all" your availability tomorrow afternoon.

I have also attached some protocols from other States for the decontamination procedures association with meth labs. Please understand that I am not advocating for us to adopt any particular/specific final clearance criteria protocol attached above. I am simply offering up models for us to explore as we attempt to develop the final clearance criteria for this incident. I have also attached an article about the case in Australia that I discussed at this morning's meeting sent to me by Dr. Milton. I am also trying to find some criteria related to mercury incidents, and checking on the similar incident that occurred in Lubbock several years ago. I have reached out to TPPC for any information or records they may have on that incident, specifically related to

decontamination protocols they may have used.

Thanks

Shaun
